

Trees are the Lungs of the World

The One Root, One Communi-Tree Project is a major initiative undertaken by EEG that aims to bring together different sectors of society, including corporates, academic institutions, and families. Through this project, individuals and groups had the opportunity to plant trees under their own name by depositing a pre-set target of recyclable materials, such as paper, plastic, aluminum cans, toners, glass, and mobile phones. The project was designed to educate and engage the community on the importance of recycling and waste management, as well as to create a habitat for local bees, insects, and other native species. It is a great example of how collective action can make a positive impact on the environment.

The students of Al Diyafah collected and sent a total of 175 kg of recyclable waste as part of the One Root, One Communi-Tree Project. As an appreciation for their active participation in the recycling drive, Al Diyafah was invited to plant a sapling in Al Muni area South of Ras Al Khaimah as a part of an urban afforestation program. The Eco Council extend their sincere gratitude to all who contributed to this effort. 'Your participation and support have helped us make a meaningful impact on the environment and support the growth of new trees.'
